Project idea for remediating industrial areas

Regional agenda for Noord-Brabant

- Profiling and branding of Noord-Brabant as an attractive region for business and entrepreneurs to locate;
- Empowering the international focus of SME's, municipalities and universities/high schools;
- Influencing and lobbying for Noord-Brabant in The Haque and Brussels

Competences of Noord-Brabant-region

- Sustainable spatial planning & watermanagement
- Environment, energy & climate
- Vital rural areas, nature conservation & development of natural areas
- Regional logistics & public transport
- Regional economy
- Management of cultural heritage
- Quality of public governance

Problemdescription

Environment

5000-7000 contaminated industrial areas > costs € 250 mln,

Stagnation

SME's have difficulties in creating jobs because of soilcontaminations

Social degradation

Policy context

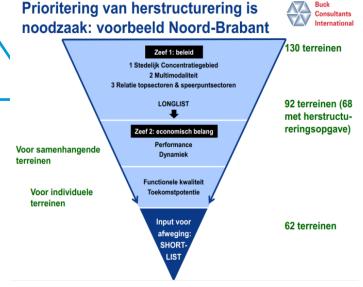

National implementation program for soilremediation

UITVOERINGSPROGRAMMA BODEMCONVENANT

> Regional program for revitalization of industrial area's

SoilBizz

Objective and subobjectives

1. To facilitate regional and local public authorities in having companies cooperating in managing their soilquality by creating a tailermade financial instrument for industrial area's

2. Subobjectives are:

- to use heat out of the soil
- to apply flexibility in thresholds or standards.

Activities

 to bring together the most recent (technical, financial, institutional and legal) know-how in area-specific groundwatermanagement and soilremediation

to set-up area-specific funds as financial instrument for longterm maintenance of soilquality management

to apply this know-how in pilots at industrial area's

Results

- A modelstrategy for soilquality management at industrial area's;
- Actionplans for a number of industrial area's; of which 3 in Noord-Brabant;
- Soilquality management will be applied in practice on a number of industrial areas.

EU-program?

INTERREG EUROPE Priority Axes

Priority Axes

- 1 Research, technological development and innovation
- 1.1 ... R&I infrastructure and capacities
- 1.2 ... delivery of innovation by actors in regional innovation chains
 - and engage in innovation
 - 3 Low-carbon economy
- 3.1 ... transition to a low-carbon economy

4 - Environment and resource

efficiency

2 - Competitiveness of SMEs

2.1 ... supporting SMEs in all stages of

their life cycle to develop, achieve growth

- 4.1 ... protection and development of natural and cultural heritage
- 4.2 ... increasing resource-efficiency, green growth and eco-innovation

Interregional Cooperation Project

1. Proposed actions

A. Interregional Cooperation Projects Main features

Implementation in 2 phases

Policy exchange of experience (1 to 3 years) ending up with the production of 1 Action Plan / Region

Monitoring of the Action Plan's implementation + possible pilot actions (up to 2 years)

Creation of 'local stakeholder groups'

INTERREG EUROPE

Regional and local public authorities $3 \times 4 = 12$

Phase 1- Modelstrategy

- Actionplan
- Application B

Phase 2- Investing

- Monitoring implementation

Local stakeholders Groups

Private&Public partners in INTERREG B

EU Programs

phase 1

exchange of know-how

result are actionplans

phase 2

- implementation of actionplans
- monitoring actionplans

"SoilBizz"

Who would like to join the region of Noord-Brabant (NL)?

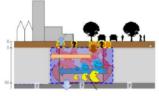

Background and problemdescription

In the upcoming years regions and cities are challenged to have their agenda's implemented in a changing Europe striving for economic growth and jobs. In these policies regional and local public authorities also have to focus on keeping their environment healthy, safe and attractive. In order to get industrial area's available for companies, to save land for agriculture and to avoid degraded industrial area's public authorities have to remediate areas that has been contaminated in the past. These industrial areas, historically contaminated are not easy to redevelop because companies (especially SME's) find difficulties in having the environmental risks properly financed. As a result investments and new jobs are delayed.

Aim and objectives

The overall aim of SoilBizz is to assist public authorities (Regions and cities) in remediating contaminated industrial areas by having companies cooperating in managing the site together. Sub objectives of SoilBizz are to prevent further degradation of these industrial areas, to promote the use of heat from the surface, to set up area based funds for financial risks and aftercare, to apply flexibility in the thresholds of the contaminants to be monitored. The integrated approach to tackle pollution of soil and groundwater in cities delivered by the CityChlor project will be applied in SoilBizz.

Activities

SoilBizz's activities are:

- to bring together the most recent expertise and experiences (in technical-, financial-, institutionaland legal terms) in soilremediation in industrial areas;
- to apply this expertise and experiences in real cases of companies cooperating in having their industrial site managed together;
- · to disseminate this approach of soilquality management in industrial areas.
